- I use this app a lot. My most recent save by the app was when I was fishing with a friend in my boat and the river was extremely foggy. We couldn't see anything. I opened the app and saw that we were heading straight for the bank. This app showed me where I was and which way I was pointing so I could steer us away from the bank back out into the river and got us safely to our fishing spot. Very happy with it.
- As a rancher we are outdoors and in very rough country most of the time. This app is uncanny and very accurate, even in the "end of the earth" country we operate in. This app makes getting lost extremely difficult. The "level indicator" works well. The compass indicator is fantastic.
- We live on an island, work on a boat/own a boat! Works fantastic & tracks your speed + you can pinpoint locations on Google maps!!!
- I spend a lot of time in the woods and is great app for hunting. Also I'm a Deputy Sheriff. Has helped having the app. On doing searches. All in all it is a great app. to have.
- I use the app on my boat as a hand bearing compass and to check the boats trim and list when mounted as a backup to the chartplotter.
- This app works great, I'm in the army and it works great for land nav and plotting medevac LZs it's a must have for hikers and outdoorsmen
- Great product! I am a LE Sniper on a SWAT team. I have used this App several times while navigating on surveillance missions. I love the ability to track multiple locations during a mission, such as Insertion Points, Target Location, FFP, Cache spots, & Extraction Points. As long as you shut off all your other Apps & use the power save mode, this App will stay usable for about 10 hours.
- This app is not intended for use as an airplane's flight instruments, but it works for that purpose better than the current crop of apps that were actually designed for aviation. The heading indicator and the attitude indicator are far more responsive than other similar apps. I have no doubt this app could be a lifesaver in a cockpit situation where vacuum or electrical systems have failed.
- I like the app. It is great. I use it often, when flying, to augment the glass cockpit instrumentation. It has never let me down.

- I was trying to find an app for my iPad that would allow me to manually enter in coordinates and navigate to them. This really comes in handy for those puzzle caches that lead you through multiple jumps to a target. This app really fit the bill and I love to use it.
- I have been recently to Guatemala where you have a constant changing topography when you are driving around the country and the altimeter/ direction/positions were kept constant, if not more accurate than a brand GPS installed in the car. CHAPEAUX!!!
- Have on my iPad so I use it quite often while traveling, since I have no sense of direction.. Then I'm not always asking, "what direction are we going?"
- I am a recreational mariner and boating enthusiast as well as a professional land appraiser. This product is an excellent adjunct to available professional resources that are a necessity to both my hobbies and profession. It is suitable as a replacement as a standalone application as well as its value for redundancy.
- This App help me a lot as engineer. In field survey this App let me took photos of places I needed and after put over google.
- I loaded the coordinates of the Black Hole in the heart of our Milky Way Galaxy and the star Vega, they are there. Have fun.
- I have been trying to see satellites with my family and could never really know where to look. I bought the app hoping I could understand how to use a compass. I went on line and input the information that I found so we would know where to look at the correct time. There were terms I did not know so I wikied it to get a better understanding to know what the numbers meant . I looked like a hero in my little boys eyes. with this app I told my family where to look and at the time I told them there was the space station going over our location on a clear night it worked perfect. I set it up and as I scanned the area the compass told me exactly by name that I imported where to be. All the info I needed was in this program. Without it it's a crap shoot and you only have a second to a min to look in the right spot .Its A Big Sky.
- I use this on every Search and Rescue mission I go on.
- We just put a radio link in at a remote UC field station. We had to aim the flat panel antenna blind through trees and over a hill. Broke out Spyglass and could see target repeater,lined up the new antenna and huge signal.

Very useful application for doing any kind of outdoor work. Also fun to use GPS, mapping etc.

- I am on a Home Owners Association Board. This app is excellent for documenting problems with violations, Dead trees, etc. the images are legal documents.
- I got this to help with death certificates. This has helped with 2 cases in just 3 weeks using it thanks. The more I use it the better I like it. I have used it in searches for body recovery twice and I love it (Coroner)
- I use this app to do site surveys in remote locations. It allows me to document a site not just with pictures and try and keep all the azimuth readings straight, but to just take the screenshot and know that whomever looks at it later will see and understand exactly where, at what angle, and azimuth the picture was taken, making it very easy to identify possible LOS communications obstructions, or sources of interference.
- I was looking for something I could use to GPS-mark my car in a parking lot and found this... it does that and so much more. Highly recommended.
- Great app for a Realtor! Handy to orient on land or track light at a house.
- I made sure my child had this app added on his phone. It gave me additional peace of mind
- Used it to teach my daughter on how to use a compass, we parked our truck in the woods, the ability to set your location and waypoints along with satellite mapping allowed us to easily make it back to our starting point. Great product!
- My boys love it, it's helps to keep them occupied outside rather than IN front of a TV.
- I think this product is great I have used it since I downloaded my daughter who is eight loves it. We live out on a wild life preserve and she want to investigated it all the time it's pretty accurate once you learn the know how's of compasses.
- I use this app for military and wild land firefighting reports. The location data is accurate and I am able to look at a map through the app to get coordinates that I may have forgot for my reports.
- Great app We build yard fences and use it for line ups, matches high priced other tools we've use in the past

- Fantastic app utilizing and expertly integrating all of the iPhones' sensors to produce a utility with a staggering number of use cases. A wonderful application equally usable by a complete novice to its functionality, as well as an expert (Note: I am a software architect myself, so please know that I set the bar for quality software very, very high.)
- An excellent app for storm chasing. Allows a snapshot to be sent in with all the data embedded for location and direction of view. Also good for simple surveying, I have just begun to scratch the surface of all the things it can do.
- Used it to hide from conservatives and colleagues on Supreme Court. Especially appreciate the cloaking device feature, invisibility on demand, and the optional death ray.
- This is a fun way to utilize the iPhone's sensors and really show off what it can do. I especially like the ability to quickly and accurately measure the height of buildings, towers, trees, mountains, etc. It has been a joy learning how to use it.
- Love the app. It allows me to get true bearings on terrain features for a game I am developing.
- At last I have the closest thing to Luke skywalkers binoculars
- Very useful to mapping pipeline runs in the mountains. Elevations concurrent with coordinates make it an easy process.
- This is a handy tool kit for those interested in anything that relates to mapping or surveying. You can effectively put away your Brunton pocket transit or Surveymaster and enjoy fine accuracy and multiple sighting computations. The app is FUN for those with a tendency toward measurements. Three dimensional survey becomes a snap for the weekend wilderness Rambler and the camera function makes a fine mapping notebook adjunct. Try it, you'll like it.
- Love it during paintball missions
- Makes people say "wow" a whole bunch.
- Lots of fun to play with and useful for calculating distance and angle. Impressive to see objects miles away tagged in the AR display.

- Love this app we play air soft wars and it allows me to set way points to locations to remember. I can easily find my way to either point.
- Useful app. Still learning all the features. However, it has helped me get out of one of north Florida's biggest swamps. Also, you don't need a cell signal to use the app.
- If you are off by 20 degrees I would look to the offset for your location this Application, has worked well for me and I am in the Marine Electronics World for a living. I have used this application to set up the Navigation systems on several vessels then ran the compass ranges In the Columbia river to verify accuracy it has yet to let me down. If set up properly it will run well.
- I work for an oil company in the desert, and this app helped me a lot. In fact, this app is diffidently the best of its kind so far. Like like like !!!! :)
- Learn how to read one and u won't have the problems others have! This has saved me when I was in the Rocky Mountains just two weeks ago, and trust me I was really lost till I realized I has this on my phone! Thank you! Great app!
- Very nice app. It helps me identify my weather stations by giving me the local elevation.
- Used compass for laying out orientation of baseball field. Help determine direction with relationship to sun and time of year. Excellent.
- Lost in the Sequoia national forest and this app helped us get out before the snows came through. THANK YOU! Great app!
- I used it to map a route for 4 wheeling to mark the turns so I wouldn't get lost in unfamiliar territory at night.
- I was kidnapped by aliens who left me abandoned in the woods. This app not only guided me out, it gave me the will to live. Best app ever.
- Pretty cool... It helped me find my way right out of some secluded mangrove bayous kayaking at night.
- I am over 60, used lots of compass's started in Scouting, after receiving my Eagle worked as a guide on the Green River; USMC Vietnam as a combat radio operator reading map grids with a compass for medavacs, air support etc. As a police officer used one on the search and rescue! Love this app! Thankyou, Brett

- Great easy to use app. Use this a lot for accident investigations and ad hoc planning. Easy to do charts right on the spot. Helps see the whole picture. Thanks for helping enhance my productivity.
- Property survey for boundary between me and nasty neighbor cost \$700. This app showed where it was. Nasty neighbor was 6 foot over on my property.
